Task: Build a Simple E-Commerce Layout using Angular

Objective:
Create a basic E-Commerce website layout using **Angular components** and **Bootstrap** for styling.

Requirements

1. **Create a new Angular project**

ng new ecommerce-app

---

2. **Create the following components**

- Navbar Component
- Slider Component
- Products Component
- Footer Component

3. **Navbar Component**

- Add a navigation bar using **Bootstrap**.
- The navbar should include:
    - Logo or website name
    - Home
    - Products
    - Contact

---

4. **Slider Component**

- Create an **image slider (carousel)** using **Bootstrap Carousel**.
- The slider should contain **at least 3 images**.

---

5. **Products Component**

- Display **at least 4 products**.
- Each product should have:
  - Image
  - Product name
  - Price
  - "Add to Cart" button
- Use **Bootstrap cards** to style the products.

---

6. **Footer Component**

- Add a simple footer with:
  - Copyright text
  - Social media icons (optional)

---

7. **Use Bootstrap**

- Install or include **Bootstrap** in the project.
- Use Bootstrap classes for layout and styling.

Final Layout Order

Your app.component.html should display the components in this order:

Navbar

Slider

Products

Footer

Submission:

Upload the project folder or GitHub repository.
