Angular E-Commerce Task – Day 2

---

1. Update the Products Component

Create an array of products inside products.ts.

```
products = [
  { id: 1, name: 'Smart Watch', price: 120, image: 'watch1.jpg', inStock: true },
  { id: 2, name: 'Classic Watch', price: 90, image: 'watch2.jpg', inStock: false },
  { id: 3, name: 'Sport Watch', price: 150, image: 'watch3.jpg', inStock: true }
];
```

---

2. Use Control Flow

Use Angular control flow to display the products.

---

3. Apply Class Binding

Add a class based on product availability.

Requirements:

- If the product is **in stock → green badge**
- If the product is **out of stock → red badge**

---

4. Apply Style Binding

Change the **price color** depending on the price.

Requirements:

- Price greater than **100 → red**
- Price less than or equal **100 → green**

---

5. Apply Attribute Binding

- Add image alt text using attribute binding. With (product name)

---

6. Implement Routing

Create routing for the project.

Pages required:

- /home
- /products
- /contact

Requirements:

- Home shows the **slider**
- Products shows the **products component**
- Contact shows a simple contact page
- ---

7. Update Navbar

- Add links in the navbar to navigate between pages.

If the product is **out of stock**, disable the **Buy Now** button using property binding.
